Testing Institute Inc.

REFILL CARTRIDGES

Available at your local supplier

UNCLE JON IS SANITARY/SIMPLE

Designed for outside workers, this patented system allows safe and convenient waste disposal for industrial or commercial use.

This revolutionary dry-flush system is the simplest available for indoor or outdoor use. With complete operating ease and mobility, there is no contamination and no spillage in this safe and sanitary unit. Accepts feminine hygiene products.

HERE'S HOW UNCLE JON WORKS

TO START THE DRY FLUSH CYCLE

Top raises easily. Grab bars pull fresh plastic from cartridge as the soiled liner and waste automatically move down to the base compartment.

LOWER TOP AND UNIT IS READY TO BE USED AGAIN

Wastes and odors are sealed away, out of sight and then is safely stored in the base. A new section of the plastic liner has been pulled down to make a fresh sanitary bowl ready for its next use.

THE SECRET IS THE PLASTIC SLEEVE CARTRIDGE

No water, chemicals or complicated mechanism. The cartridge hidden under the seat does the work. After approximately 30 flushes, the waste storage container in the base of the unit, and its contents, can be disposed of easily.
